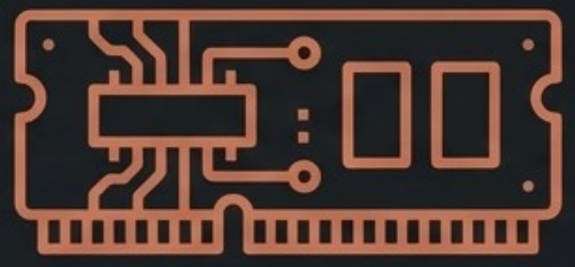
CyberLab 2026: Zero to Dominance

Building and breaking a custom Active Directory range.

The Build	The Goal
Windows Server 2022	NT AUTHORITY\SYSTEM
Windows 10	Domain Admin
Kali Linux	

1. Hardware Constraints



The Limit: 16GB RAM

The Pivot: MINILAB Architecture

Design: 1 DC + 1 Client. Lean and lethal.

2. Network Isolation

Target: VMnet2

Scope: Host-only environment

Rule: VMware DHCP disabled

Status: Total isolation

3. Troubleshooting Bugs

Bug Triage

JetBrains Mono
SVGA 3D Crash

↓

JetBrains Mono
Fix: Disable
3D Accel.

JetBrains Mono
LOF ISO Trap

↓

JetBrains Mono
Fix: Use official
Eval ISO

JetBrains Mono
EFI Floppy Error

↓

JetBrains Mono
Fix: Build empty
VM first

4. Server Config

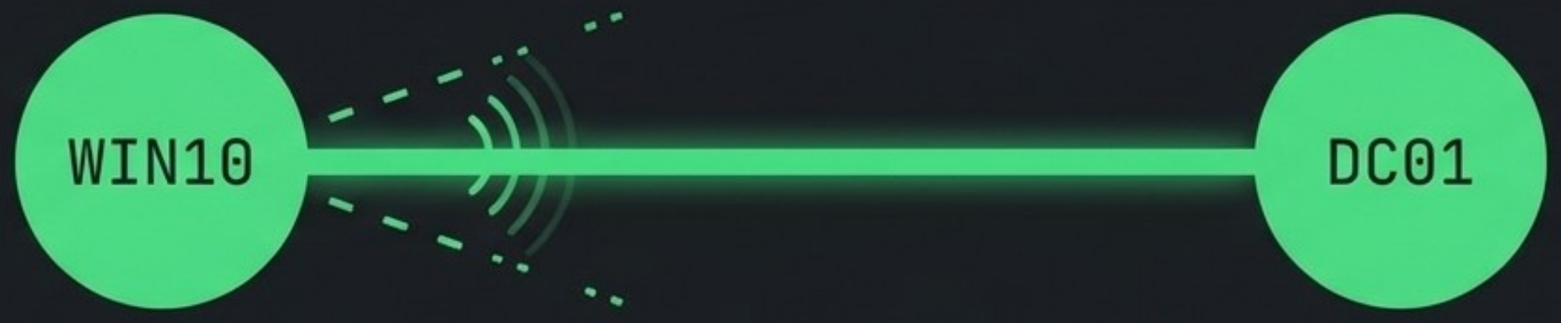
```
> ncpa.cpl
```

- Tool: `ncpa.cpl`
- Action: Manual network override.
- Locked: IP `192.168.15.10`.

5. Domain Creation

[
Core: AD DS Installed.
Status: `cyber.local` is live.
Result: The Empire is born.
]

6. Client Join



- The Missing Link: DNS.
- Target: Point **WIN10** DNS to 192.168.15.10.
- **Status**: Client joined.

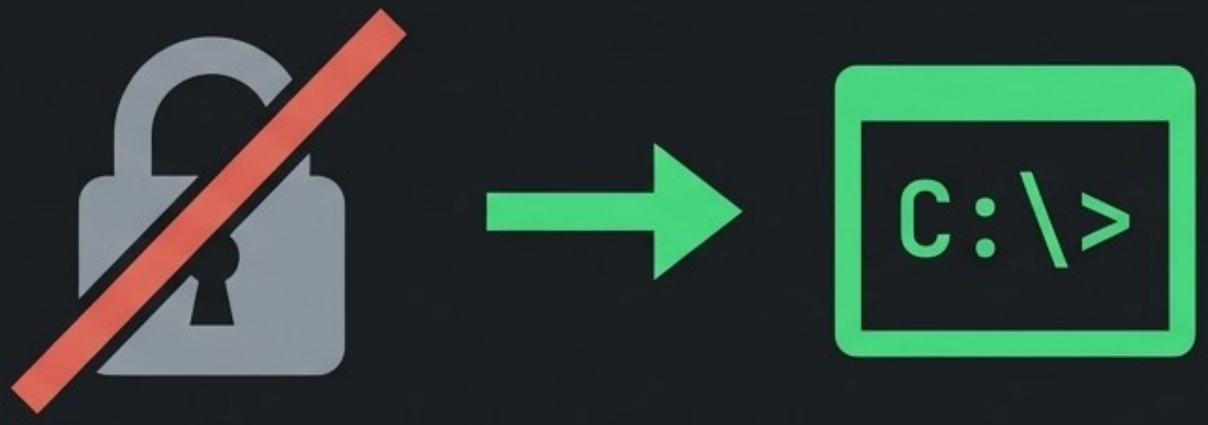
7. Vulnerability Injection

```
ID: jdupont
Role: Local Admin on WIN10
Auth: Standard
```

```
ID: svc_sql
Role: Service account
Auth: Pre-Auth disabled
```

Target: svc_sql
The Flaw: Kerberos pre-auth disabled.
Status: Trap is set.

8. Physical Bypass



The Exploit: `Utilman` hijack.

Pivot: `utilman.exe` ➔ `cmd.exe`

Result: SYSTEM shell at login.

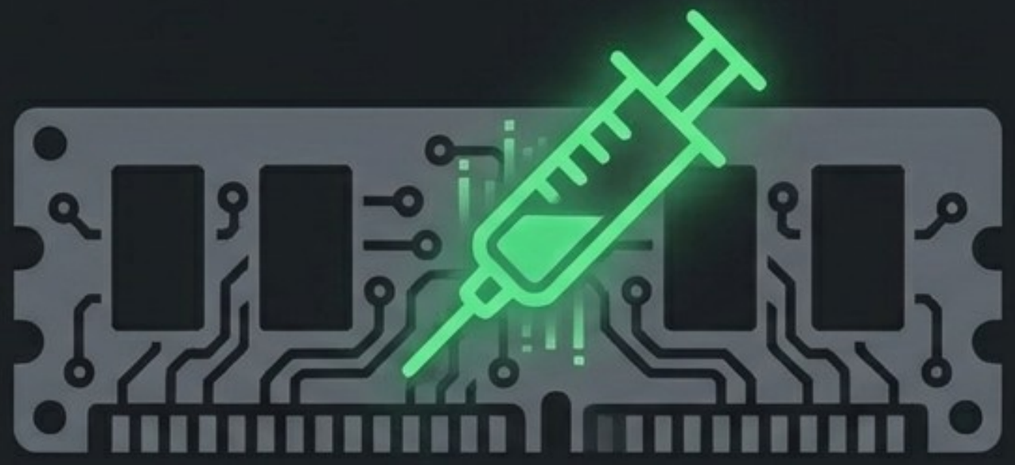
9. AS-REP Roasting

The Attack: AS-REP Roasting.

Target: `svc_sql` (pre-auth disabled).

Result: Ticket captured. Hash cracked.

10. LSASS Extraction



The Pivot: Dump `lsass.exe`.

Action: Memory extracted.

Result: Domain Admin token stolen.

11. DCSync

```
nxc smb 192.168.15.10 -u 'Administrateur' -H 'aa0b2f64a877bedcaecb1f1658cb0b70' --ntds
```

The Killshot: DCSync.
Payload: NTDS.dit dumped.
Result: Total Domain Dominance.
